"The only ERP software for the golf course. The most comprehensive golf course management system designed to facility all areas of management."

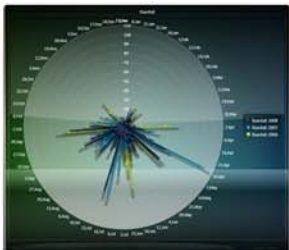

Golf Monitor

Golf monitor is only ERP software solution in the market. The solution provides the missing link between the different groups of people involved in the operation.

Features
Using Microsoft WPF, the application is a graphically rich User Interface (UI) designed with simplicity in mind where all data are presented in chart format.

Moreover the solution is designed to be problem free that even after a computer crash your data will still be available.

For the superintendents they now have the ability to manage their budgets, reason for capital expenditure, track work orders, track inventory, auto maintenance alerts, fuel usage and even view the golf course from the air.

When integrated with a weather station combined with the cultural practices the software will be able to assist the superintendent to forecast course conditions.

For the owners, the solution can provide

a breakdown of how the team are spending the budget, market comparison of purchasing, and detailed ROI data for capital expenditure decision making.

With the software advance online direct marketing the suppliers are now able to inform the user of the latest products, sales promotions, and training materials.
