"The only FBI and US Department of Justice certified software and scanner in the market"

Biometric Fingerprint Scan

Product Description

IConcepts offers a full range of biometric fingerprint capture and cross matching capability. The software is designed to provide the user an intuitive and easy to use interface at the same time incorporating the latest technology and commonly used backbends into our package. Providing a fully scalable and flexible product allowing you to upgrade as your business grows.

Our software was designed from the ground up with the customers needs as the focal point, allowing customers to fully customize the business requirements without the need for application customization. The business rules are fully configurable and easy to use (standard XML technology). This reduces the cost over the life of the product eliminating the need to have us reconfigure the application whenever changes are required.

At IConepts, we have a product for every fingerprint needs; ranging form single capture prints to the full ten print and palm capture. Our scanners are not those basic CMOS non-durable type scanners, ours is the full optics CCD scanner that is designed to provide long lasting continuous use 24 by 7.
